

Detecting ECG Late Potentials Using Wavelet Transform

by VAI MANG I

Call_No: PHD002.VAI

CONTENTS	
Chapter 1 Introduction	1
Table of Contents	1-1
Table of Figures	1-3
1.1 Electrocardiograms	1-5
1.1.1 The EGO mechanism	1-5
1.1.2 The EGO waveform	1-8
1.1.3 Recording of the ECG	1-10
1.1.4 The ECG Lead system	1-11
1.2 Ventricular late potentials	1-12
1.2.1 The clinical value of ventricular late potentials	1-14
1.2.2 Ventricular late potentials data acquiring	1-14
1.2.3 Ventricular late potentials detecting	1-15
1.2.4 Difficulty in detecting ventricular late potentials	1-15
1.2.5 Noise reduction	1-16
1.2.6 Detect ventricular late potentials in time domain	1-17
1.2.7 Detect ventricular late potentials in other domains	1-17
1.2.8 Typical ventricular late potentials detecting procedure currently used	1-18
1.2.9 Detecting variance of ventricular late potentials	1-19
1.2.10 Drawback of existing methods	1-19
1.3 Purpose of research	1-20
1.4 Thesis overview	1-21
1.5 Statement of originality	1-23

References	1-26
Chapter 2 ECG de-noising	2-1
Table of Contents	2-1
Table of Figures	2-2
2.1 Noise in ECG	2-4
2.2 Noise level requirement	2-5
2.3 Multi-beat average	2-6
2.4 Adaptive line enhancement	2-7
2.5 Beat sequence filter	2-8
2.5.1 Moving average beat sequence filter(MABS)	2-10
2.5.2 Wavelet transform de-noising (WTDN)	2-14
2.6 WTDN verification	2-17
2.6.1 Simulation ECG Signal	2-17
2.6.2 Clinical ECG Signal	2-20
References	2-23
Chapter 3 Endpoint Location	3-1
Table of Contents	3-1
Table of Figures	3-2
3.1 Wavelet packet and filter bank	3-6
3.2 Signal noise ratio & correlation coefficient between two Beats	3-8
3.3 ECG signal after passing the filter bank	3-9
3.4 Threshold selection	3-11
3.5 Filter bank selection	3-11
3.6 Method verification	3-12
3.6.1 Simulation ECG signal	3-12
3.6.2 Clinical ECG signal	3-15
References	3-17
Chapter 4 VLP variance detecting system	4-1
Table of Contents	4-1
Table of Figures	4-2
4.1 Low noise amplifier	4-4
4.2 Data acquisition	4-5

4.3	ECG matrix conversion	4-6
4.4	Band pass filter	4-7
4.5	WTDN beat-sequence filter de-noising	4-8
4.6	QRS complex endpoint detecting	4-8
4.7	VLP index calculation	4-8
4.7.1	Parameters calculation using semi-de-noised signal	4-9
4.7.2	VLP index definition	4-10
	References	4-13
Chapter 5 Results and conclusion		5-1
	Table of Contents	5-1
	Table of Figures	5-2
	Table of Tables	5-3
5.1	Simulation signal	5-5
5.1.1	The effectiveness of the system	5-8
5.1.2	VLP variance detecting ability	5-11
5.2	Clinical signal	5-13
5.3	Discussion and conclusion	5-16
	References	5-19
Chapter 6 Conclusion		6-1
	Table of Contents	6-1
6.1	Conclusion	6-3
6.2	Suggestion for possible future work	6-4
6.2.1	Clinical issues	6-4
6.2.2	weights in VLP index	6-5
6.2.3	System implementation platform	6-5
6.2.4	Algorithm implementation	6-6
	References	6-7
Appendix A VLP indexes for clinical data		A-1
	Table of Contents	A-1
	Table of figures	A-2
Appendix B Wavelet transform and Filter Bank		B-1
	Table of Contents	B-1

Table of Figures	B-3
B.1 Fourier transform	B-5
B.1.1 Short time Fourier transform	B-6
B.2 Wavelet transform	B-9
B.2.1 Continuous wavelet transform(CWT)	B-10
B.2.2 Discrete wavelet transform(DWT)	B-13
B.2.3 Multiresolution representation	B-15
B.2.4 Biorthogonal Wavelet Transform	B-19
B.2.5 Biothogonal multiresolution representation	B-19
B.3 Filter bank	B-22
References	B-35
Appendix C Source code list	C-1
